

# The Culinary Herb Garden

---

Bed Map

This garden was created with the intent of not only providing fresh culinary herbs for the campus chef but also designed such that students can sit along the wall surrounding the garden in order to enjoy the fragrances and textures of the herbs within the garden. In late summer of 2012 the herb garden was completely redesigned and replanted. The soil mix in this garden is a blend of compost and a baked slate material manufactured in North Carolina called Perma-till. This blend allows for excellent drainage, a key requirement for many herbs.
