Co-founder of Apple Computer Inc. and Silicon Valley icon, Steve Wozniak, helped shape the computing industry with his design of Apple’s first line of products the Apple I, and II, and influenced the popular Macintosh. In 1976, Wozniak and Steve Jobs founded Apple Computer Inc. with Wozniak’s Apple I personal computer. The following year, he introduced his Apple II personal computer, featuring a central processing unit, a keyboard, color graphics, and a floppy disk drive. The Apple II was integral in launching the personal computer industry. For his achievements at Apple Computer, Wozniak was awarded the National Medal of Technology by the President of the United States in 1985, the highest honor bestowed on America’s leading innovators. In 2000, he was inducted into the Inventors Hall of Fame and was awarded the prestigious Heinz Award for Technology, The Economy and Employment for “single-handedly designing the first personal computer and for then redirecting his lifelong passion for mathematics and electronics toward lighting the fires of excitement for education in grade school students and their teachers.” After leaving Apple in 1985, Wozniak has been involved in various business and philanthropic ventures, focusing primarily on computer capabilities in schools and stressing hands-on learning and encouraging creativity for students.
