

SMART TEAMS: USING GENERATIVE AI TO FUEL GROUP LEARNING

Wednesday, October 1, 2025 - **Jakub Michel**
Assistant Professor, Data Analytics and Statistics
.....

The integration of generative AI into group learning fosters **creativity and collaboration** among students. By utilizing generative AI tools, students can generate diverse project ideas and expedite design, making learning more engaging and effective.

.....

Inspire with AI

- Use AI to spark ideas for group projects (e.g., app creation, competition themes).
 - Explore tools like Blackbox AI and Microsoft Copilot for brainstorming.
-

Collaborate Smarter

- Leverage Microsoft apps for organizing tasks, sharing files, and co-authoring.
 - Encourage roles within teams to explore AI features together.
-

Prepare and Practice

- Use AI for exam prep: generate questions, clarify concepts, simulate assessments.
 - Teach students to critically evaluate AI-generated content.
-

Think Critically, Use Responsibly

- AI can be helpful—but it can also fabricate information.
 - Promote ethical use: verify facts, question outputs, and reflect on limitations.
-
