HIGH POINT UNIVERSITY POLL 128: MEMO RELEASE	
Population:	Adults (people over the age of 18) in North Carolina who are registered to vote in North Carolina
Sample size:	800 adults in North Carolina (800 individuals who said they are registered to vote, 620 individuals who qualified as likely 2026 likely general election voters--see appendix below.)
Mode of data collection:	Online interviews were collected through one survey instrument. All interviews were conducted in English.
Type of sample:	Non-probability samples from YouGov's online panels (North Carolina).
Dates of data collection:	October 1 – 20, 2026
Credibility intervals for samples:	The SRC/YouGov provide a credibility interval of plus or minus 4.1 percentage points for the self-identified registered voter (n = 800) sample to account for a traditional 95% confidence interval for the estimates (plus or minus 3.9 percentage points) and a design effect of 1.19 (based on the weighting). For the likely voters (n = 608), that credibility interval is 4.7 with a design effect of 1.42 (based on the weighting). These are attempts to estimate error from the nature of the sample. Additional factors such as question wording and other methodological choices in conducting survey research can introduce additional errors into the findings of opinion polls.
Data quotas and weighting:	YouGov interviewed 1046 North Carolinian registered voters who were then matched down to a sample of 800 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The frame was constructed by stratified sampling from the full 2024 American Community Survey (ACS) 1-year sample with selection within strata by weighted sampling with replacements (using the person weights on the public use file). The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and home ownership. The

	propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles. The weights were then raked along 2024 presidential vote choice and a four-way stratification of gender, age (4-categories), race (4-categories), and education (4-categories), to produce the final weight.
Survey sponsor and funded by:	High Point University, High Point, NC.
Human response authentication:	At each stage of the panelist lifecycle, YouGov embeds layered checks that validate authenticity, identify risk, and protect data quality. These include email validation, device fingerprinting, geolocation and VPN checks, respondent threat scoring, structured on-boarding, response quality surveys and id verification. Additionally, within this survey, YouGov excluded respondents based on the following quality control measures: screening of high risk respondents using geolocation and device fingerprinting information; attention, incidence, and straight lining checks; open-end quality assessment and open-end LLM detection.
Survey/Data collection supplier:	High Point University's SRC drafted the survey instrument which was approved by the HPU Institutional Review Board. Interviews collected through YouGov's proprietary online survey software. YouGov invited online panel respondents.
Sample supplier:	Online panel (North Carolina) provided by YouGov. Respondents were compensated according to their agreements with YouGov.
Commitment to transparency:	The HPU Poll reports methodological details in accordance with the standards set out by AAPOR's Transparency Initiative, and the HPU Survey Research Center is a Charter Member of the Initiative.
Executive Director: Staff Director: Program Coordinator:	Martin J. Kifer, 336-841-9333 J.R. Moller, 336-841-2820 Tiffany Medford, 336-841-4540
Methodology:	Interested parties can access results from the survey at http://www.highpoint.edu/src/hpupoll and should contact the Directors for additional information.

*Percentages are rounded to the nearest whole number. It is possible that percentages in tables may not always add up to 100% due to rounding error.
**Values less than 0.5 are presented as "*" in the tables.
***Values of 0 are presented as "-" in the tables.

Appendix: Likely Voter Model

The SRC created estimates for "likely voters" using an index comprising responses from seven questions. Respondents received 1 point for each responses to the seven items that are associated with higher likelihood of voting.

Did you vote in the 2024 general elections in November that included votes for U.S. President, North Carolina Governor, and other offices? (Yes, I voted)

How much thought have you given to the upcoming election for U.S. Senate? (Quite a lot, Some, Only a little)

Do you happen to know where people who live in your neighborhood go to vote? (Yes)

How often would you say you vote -- always, nearly always, part of the time, or seldom? (Always)

Do you, yourself, plan to vote in the election this November, or not? (Yes)

I'd like you to rate your chances of voting in November's election for U.S. Senate on a scale of 1 to 10. If 1 represents someone who definitely will not vote and 10 represents someone who definitely will vote, where on this scale of 1 to 10 would you place yourself? (Respondent chose 8, 9, or 10)

Self-identified registered voters who scored a total of 5 or 6 on this index were Considered likely voters.

Results of those six items are reprinted below. They also appear in the order they were administered above in the survey.
